Laïla SALHI - Clément TRASSOUDAINE

1 - RecSys

This first lab is aiming to create a recomendation system and to evaluate it on a LastFM listening Dataset, using the matrix decomposition algorithm, which is pretty efficient and easy to implement.

Improvements to the model and experiments are given at the end of the notebooks

2 - MC

This lab is about the Monte-Carlo decision algorithm.

3 - House-Pricing

Determine the price of Houses based on training data.
